

Tg(hsp70l:Gal4)1.5kca4

Transgene description

The *Tg(hsp70l:Gal4)1.5kca4* transgene contains the GAL4 cDNA under control of a 1.5 kb fragment from the *hsp70* promoter (Scheer et al., Development 128:1099-1107, 2001).

Genotyping assay

To genotype the *Tg(hsp70l:Gal4)1.5kca4* line, the transgene-specific primers (AN001 and AN002) are used.

Primers:

AN001: 5' CGC TAC TCT CCC AAA ACC AAA AGG 3'

AN002: 5' TCT CTT CCG ATG ATG ATG TCG CAC 3'

PCR program (55_30_30):

- 1_94°C for 3 min
- 2_94°C for 30 s
- 3_55°C for 30 s
- 4_72°C for 30 s
- 5_Go to step 2 (above) for 34 cycles
- 6_72°C for 5 min
- 7_8.0°C hold
- 8_END

Product size: 292 bp

The 292-bp product is specific for the genomic DNA containing the *Tg(hsp70l:Gal4)1.5kca4* transgene. No PCR product is generated for wild-type genomic DNA.

IMPORTANT NOTE: It is possible that multiple copies of the transgene might have integrated into the genome during transgenesis and that some of these integrations are non-functional. Samples that contain only a non-functional transgene or its fragment will be identified falsely as positive in the genotyping assay. For this reason, it is recommended to use functional assays to verify individuals identified as positive in the genotyping assay.
