\**Mycobacterium spp.*  
 A single species of *Mycobacterium*, *M. chelonae*, has been identified from zebrafish and biofilms in the ZIRC Main Fish Room (Whipps et al., 2008). ZIRC sends all paraffin blocks of fish diagnosed with mycobacteriosis to the Oregon State University Veterinary Diagnostic Laboratory for a qPCR assay to identify the species of *Mycobacterium*. *M. chelonae* is the only species that has been identified in ZIRC fish.
